The disclosure is objected to because of the following informalities: page 1 of the specification fails to set forth priority to PCT/JP03/00593.

Appropriate correction is required.

Claim 1 is objected to because of the following informalities: claim 1 has not been limited to a single sentence. Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venturello et al (European Patent No. 0 146 374) in combination with Young (U.S. Patent No. 2,813,908) or the British Patent GB 1 208 144.

Venturello et al disclose a process for preparing diols by reacting an olefin in the presence of hydrogen peroxide and a polymer (pages 5-6) but do not disclose the use

of polymer having a sulfonic group. However, since each of Young (column 2) and the British Patent '144 (page 1, column 2) discloses the use of polymers having sulfonic groups in the hydration of olefins, a person having ordinary skill in the art at the time the present invention was made would have been motivated to use polymers having sulfonic groups in the process disclosed by Venturello et al because such a person would have expected the production of diols.
